## Measles, Mumps and Rubella Vaccine, Live

[General Notices](#)

(Measles, Mumps and Rubella Vaccine (Live), Ph. Eur. monograph 1057)

The label may state 'MMR'.

Ph Eur

### DEFINITION

Measles, mumps and rubella vaccine (live) is a freeze-dried preparation of suitable attenuated strains of measles virus, mumps virus and rubella virus.

The vaccine is reconstituted immediately before use, as stated on the label, to give a clear liquid that may be coloured owing to the presence of a pH indicator.

### PRODUCTION

The 3 components are prepared as described in the monographs [Measles vaccine \(live\) \(0213\)](#), [Mumps vaccine \(live\) \(0530\)](#) and [Rubella vaccine \(live\) \(0102\)](#) and comply with the requirements prescribed therein.

### FINAL BULK VACCINE

Virus harvests for each component are pooled and clarified to remove cells. A suitable stabiliser may be added and the pooled harvests diluted as appropriate. Suitable quantities of the pooled harvest for each component are mixed.

Only a final bulk vaccine that complies with the following requirement may be used in the preparation of the final lot.

### Bacterial and fungal contamination

Carry out the test for sterility (2.6.1), using 10 mL for each medium.

### FINAL LOT

For each component, a minimum virus concentration for release of the product is established such as to ensure, in light of stability data, that the minimum concentration stated on the label will be present at the end of the period of validity.

Only a final lot that complies with the requirements for minimum virus concentration of each component for release, with the following requirement for thermal stability and with each of the requirements given below under Identification and Tests may be released for use.

Provided that the tests for bovine serum albumin and, where applicable, for ovalbumin have been carried out with satisfactory results on
