Abstract

Purpose – The purpose of this paper is to define and delineate cyber security culture. Cyber security has been a concern for many years. In an effort to mitigate the cyber security risks, technology-centred measures were deemed to be the ultimate solution. Nowadays, however, it is accepted that the process of cyber security requires much more than mere technical controls. On the contrary, it now demands a human-centred approach, including a cyber security culture. Although the role of cultivating a culture in pursuing cyber security is well appreciated, research focusing intensely on cyber security culture is still in its infancy. Additionally, knowledge on the subject is not clearly bounded and defined.

Design/methodology/approach – General morphological analysis (GMA) is used to define, structure and analyse the cyber security environment culture.

Findings – This paper identifies the most important variables in cultivating a cyber security culture.
