# Basic Search and FullText Access from IEEE Xplore digital library

Revised since 22/11/2021

#### Welcome to NUsearch Malaysia

There have been some changes to library eResources links.

For more information, visit our news article.

Due to scheduled maintenance, NUsearch may be unavailable weekly **from 11pm Saturday to 2am Sunday.** 

### Where can I get help?

Need help? is always available from the NUsearch menu, and further help and support can be found on the Library website.

For any enquiries and assistance, please contact libraryservices@nottingham.edu.my

You may also drop-in to our Chat with your librarian sessions (Monday to Friday, 2pm-5pm) on MS Teams.

# Research on Artificial Intelligence Algorithm and Its Application in Games

Cundong Tang<sup>1,2</sup>, Zhiping Wang<sup>2</sup>, Xiuxiu Sima<sup>2</sup>, Lingxiao Zhang<sup>2</sup> <sup>1</sup>School of Information Science and Technology, Northwest University, Xi'an 710127, China <sup>2</sup>Software Engineering College, Nanyang Institute of Technology, Nanyang 473004, China \*Corresponding author: Cundong Tang nykaoshi@163.com

Abstract-With the in-depth development of intelligent technology, game artificial intelligence (AI) has become the technical core of improving the playability of a game and the main selling point of game promotion, deepening the game experience realm. Modern computer games achieve the realism of games by integrating graphics, physics and artificial intelligence. It is difficult to define the meaning of realistic game experience, but generally speaking, it usually refers to the immersion of the game and the intelligence of non-player characters in the game. As the technical core of improving game playability and the selling point of many commercial games, game artificial intelligence gives players a way to interact with non-player characters in the game, and promotes the realm of game experience to a higher level. Based on this, this paper analyzes the history and present situation of artificial intelligence in game development, and puts forward the possible changes and impacts of artificial intelligence technology based on machine learning on game development in the future.

their own games [8]. Because game AI has not made great progress like graphics technology and physical simulation technology, it provides a space for game innovation and alienation. The application of graphics technology and physical characteristics simulation technology has been insufficient, making a game unique [9]. As the technical core of improving game playability and the selling point of many commercial games promotion, game AI gives players the way to generate behavior and emotional interaction with non player characters in the game, and promotes the realm of game experience to a higher level [10]. How to endow the non player characters with credible intelligence, so that they can more truly reflect the human like behavior, emotion, and even self-learning to adapt to the changing game environment, has become a hot spot of game research and development at home and abroad [11]. This paper analyzes the history and current situation of AI in game development, and puts forward the possible changes and influences of AI
